IMPORTANT SAFETY INSTRUCTIONS (CONT.)

Before installing and using your air conditioner, please read this owner’s manual carefully. Store this manual in a safe place for future reference. Your safety and the safety of others is very important to us. Please pay attention to all safety messages outlined in this owner’s manual.

WARNING: To reduce the risk of fire, electrical shock or injury when using your air conditioner, follow the following basic precautions:

- Plug into a ground 3 prong outlet.
- Do Not remove the ground prong.
- Do Not use a plug adapter.
- Do Not use an extension cord.
- Unplug the air conditioner before any maintenance.
- Use two or more people to move and install the air conditioner.

This is a safety alert symbol. This symbol alerts you to potential hazards that can harm you or others or even cause death. All safety messages will directly follow the safety alert symbol and/or the words “DANGER” or “WARNING”.

DANGER

Failure to immediately follow these instructions may cause serious injury or even death.

WARNING

All Safety messages alert you of potential hazards, how to reduce the chance of injury, and what can happen if instructions are not followed correctly.

---

1
ELECTRICAL REQUIREMENTS

The electrical ratings for your air conditioner are listed on the model and serial number label located on the front left side of the unit (when facing the front).

Specific electrical requirements are listed in the chart below. Follow the requirements below for the type of plug on the power supply cord.

<table>
<thead>
<tr>
<th>Power Supply Cord</th>
</tr>
</thead>
<tbody>
<tr>
<td>15K 15A/115V</td>
</tr>
<tr>
<td>18K/22K/24K 20A/230V</td>
</tr>
</tbody>
</table>

Recommended Ground Method

For your personal safety, this air conditioner must be grounded. This air conditioner is equipped with a 3 prong power supply cord with a grounded plug. To minimize the possibility of electrical shock, the cord must be plugged into a 3 prong outlet and grounded in accordance with all local codes and ordinances. If a 3 prong outlet is not available, it is the customer's responsibility to have a properly grounded 3 prong outlet installed by a qualified electrician.

It is the customer's responsibility:
- To contact a qualified electrician
- To assure that the electrical installation is adequate and in conformance with the National Electrical Code, ANSI/NFPA 70 - latest edition, and all local codes and ordinances.

Copies of the standards listed may be obtained from:
National Fire Protection Association
One Batterymarch Park
Quincy, Massachusetts 02269

LCDI Power Cord and Plug

This air conditioner is equipped with an LCDI (Leakage Current Detection and Interruption) power cord that is required by UL. This power supply cord contains state-of-the-art electronics that sense leakage current. If the cord is damaged and leakage occurs, power will be disconnected from the unit.

The test and reset buttons on the LCDI Plug are used to check if the plug is functioning properly. To test the plug:
1. Plug power cord into a grounded 3 prong outlet
2. Press RESET (on some units a green light will turn on).
3. Press the TEST Button, the circuit should trip and cut all power to the air conditioner (on some units a green light may turn off).
4. Press the RESET button for use. You will hear a click and the A/C is ready for use.

NOTES:
- The RESET button must be engaged for proper use.
- The power supply cord must be replaced if it fails to trip when the TEST button is pressed and the unit fails to reset.
- Do not use the power supply cord as an ON/OFF switch. The power supply cord is designed as a protection device.
- A damaged power supply cord must be replaced with a new power supply cord.
- The power supply cord contains new user serviceable parts. Opening the tamper-resistant case voids all warranty and performance claims.

NOTE: Your unit's power cord and plug may differ from the one shown.

### TOOLS NEEDED

- Phillips Head Screwdriver
- Flat Head Screwdriver
- Drill & 3/16" Drill Bit
- Pencil
- Tape Measure
- Scissors or Knife
- Level
- Adjustable Wrench

**NOTE:** Save carton and these Installation Instructions for future reference. The carton is the best way to store unit during winter or when not in use.
DISCLAIMER

ALL INFORMATION AND THE TECHNICAL SPECIFICATIONS PRESENTED IN THIS USER'S MANUAL ARE THE PRESENTATION OF THE MANUFACTURER.

INSTALLATION & ASSEMBLY INSTRUCTIONS

Window Preparation

Please read all instructions prior to installing your air conditioner. Two people are recommended to install this product. If a new electrical outlet is required, have the outlet installed by a qualified electrician before installing the unit.

Before installing the unit, check the dimensions of your window to make sure the air conditioner will fit. This unit is made to fit inside a standard double-hung window. Make sure the window is in good shape and able to firmly hold the needed screws. If not, make repairs prior to installing the unit.

Storm Window Requirements
A storm window frame will not allow the air conditioner to tilt properly which in turn will keep it from draining properly. To adjust for this, attach a board or piece of wood to the sill. The board or wood piece should have a depth of at least 1/2". Make sure the board or piece of wood is approximately 1/2" higher than the storm window frame. This will allow the air conditioner to tilt enough for proper drainage. (15K/18K See FIG.1/FIG.2 ; 22K/24K See FIG.3/FIG.4).

Prior to Installing the Air Conditioner
1. Check for anything that could block airflow. Check the area outside of the window for things such as shrubs, trees, or awnings. Check the inside area to make sure curtains, drapes, or blinds will not prevent proper airflow.
2. Check the available electrical outlet. The power supply must be the same as shown on the unit serial nameplate (located on the left side of the unit, near the front faceplate). Be sure the outlet is close enough for the power cord to reach.
3. Carefully unpack the air conditioner. Remove all packing material and make sure the floor is protected when removing. Due to the large size of this air conditioner, two people should move the unit together.

When handling the unit, be careful to avoid cuts from the sharp metal edges and aluminum fins on the front and rear coils.
1. Pull down the front panel and remove the filter (FIG. 5 below)
2. Lift the front panel upwards to remove and place to the side.
3. Locate the four faceplate screws and remove. These screws will need to be re-installed after mounting the air conditioner (FIG. 6 above)
4. After removing the screws, gently pull away the faceplate from the air conditioner cabinet (FIG. 7 & 8).
5. Remove the control panel screw(s) from the front panel (FIG. 9)

Note: Remove one screw for the 15,000 BTU and 18,000 BTU. Remove two screws for the 24,000 BTU.
6. Remove the six screws from the cabinet. (There are two screws on the top, left and right.) (FIG.10)

7. Hold the cabinet while pulling on the base handle to carefully remove the unit. Do not pull or lift near the top of the unit (FIG.11).

8. Remove the shipping block for the 24K (FIG.12).
ASSEMBLY & INSTALLATION (CONT.)

Top Angle Rail and Side Bracket Installation

The top rail must be assembled prior to installing the air conditioner in the window

**Tools Needed:** Phillips Screw Driver

<table>
<thead>
<tr>
<th>Top Rail Hardware</th>
<th>QTY</th>
</tr>
</thead>
<tbody>
<tr>
<td>5/16&quot; Long Hex-head Screw</td>
<td>4</td>
</tr>
<tr>
<td>Top Rail</td>
<td>1</td>
</tr>
</tbody>
</table>

**Attaching the Top Rail to the Air Conditioner**

1. Remove the air conditioner from the box and place on a hard flat surface.

2. Remove top rail from the bottom of the packaging material as shown in FIG. A

3. Secure the top rail to the unit with the 5/16" Screws as shown in FIG. B

4. Confirm the "I" section insert into the window accordion panel for both sides as shown in (FIG.13a).

5. Insert top and bottom legs of window accordion panel frame into channel in the top angle and bottom rail. Do both sides. Install side retainer to cabinet as shown. (FIG.13b-14).

**Placing the Cabinet Inside the Window**

1. Open the window and place the cabinet in the middle of the window sill.

2. Make sure the bottom rail is seated over the window sill as shown below. Bring the window down temporarily behind the top angle rail to hold the cabinet in place.

   (It is suggested to keep a downward slope so accumulated rain water can drain out from the backside of the unit.)

   **NOTE:** For safety reasons, all 4 screws must be used to attach the top rail.
3. Fasten cabinet to window sill using two 5/8" Round-Head screws. Pre-drill holes if needed. Add the window foam (for back-up use) over the screws. (It should set on the gasket for 22K/24K)

Install Support Brackets
1. Hold each support bracket flush against the outside of the window sill. Tighten each bracket to the bottom of the cabinet as shown below. Mark the brackets at top lever of the window sill and then remove.

Extend the Accordion Panels
1. Carefully raise the window to expose the accordion panel and panel frame. Loosen the locking screws so the accordion panels slide easily.
2. Extend each panel to completely fill the width of the window. Tighten the locking screws when the panels are fully extended.
ASSEMBLY & INSTALLATION (CONT.)

Install the Window Lock and Sash Seal

1. Trim the sash seal to fit the width of the window. Insert the sash seal into space between the upper and lower sashes.

2. Attach the right angle sash lock as shown below.

Installing the Chassis into the Cabinet

1. Team lift (two people) the air conditioner chassis and carefully slide it into the cabinet. Let the front of the air conditioner hang out approximately 6".

2. **CAUTION:** DO NOT PUSH ON THE CONTROLS OR FINNED COILS.

3. Be sure the chassis is firmly seated in the back of the cabinet.

4. Insert all screws removed during window installation and reattach the front face plate, front panel, and the air filter. Use the REMOVE CHASSIS instructions and figures 5-11 for reference.

THRU-THE-WALL INSTALLATION

**NOTE:** Consult local building codes prior to installation and/or a qualified carpenter.

Select the Wall Location

This air conditioner has a slide-out chassis, so that it can be installed through an outside wall as specified below:

**MAX WALL THICKNESS:** 8"

**IMPORTANT:** The side louvers must never be blocked.

**NOTE:** All parts needed for Thru-The-Wall Installation are provided, except a wood frame, shims, and 10 wood screws (10-1" long minimum). Select a wall surface that:

1. Does not support major structural loads such as the frame construction at ends of windows, and under truss-bearing points, etc.
2. Does not have plumbing or wiring inside.
3. Is near existing electrical outlets, or where another outlet can or will be installed.
4. Does not have objects blocking the air vents which limits cooling.
5. Allows unblocked airflow from the rear and sides of the air conditioner.

Prepare the Wall

1. Prepare the wall in frame construction (including brick and stucco veneer). Working from inside the room, find the wall stud that is nearest the center of the installation area.
2. Cut a hole on each side of the center stud.
3. Measure between the inside edges of every other stud as shown below.
ASSEMBLY & INSTALLATION - THRU-THE-WALL (CONT.)

Carefully measure and cut an opening with the following dimensions depending on your model.

WIDTH “X” = inside model plus twice the thickness of the framing material used.
HEIGHT “Y” = inside model height plus twice the thickness of framing material used.

<table>
<thead>
<tr>
<th>Model</th>
<th>15K/18K</th>
<th>22K/24K</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inside Frame Height</td>
<td>18 1/4&quot; (46.4 cm)</td>
<td>19 1/2&quot; (49.5 cm)</td>
</tr>
<tr>
<td>Inside Frame Width</td>
<td>23 7/8&quot; (60.6 cm)</td>
<td>26 9/10&quot; (68.3 cm)</td>
</tr>
</tbody>
</table>

NOTE: If wall thickness is 8-1/2” or more, add aluminum flashing over the bottom of the frame opening to assure water is unable to enter the area between the inner and outer wall.

Prepare and Install the Cabinet

1. Slide the chassis from the cabinet. Refer back to the REMOVE CHASSIS instructions (Page 6 and 7) in the WINDOW MOUNTING SECTION.
2. Place the cabinet into the opening with the bottom rail resting firmly on the bottom board of the wood frame.
3. Position the cabinet so it is tilted properly for water removal as seen below.
4. Secure the bottom rail to the wood frame with two large 1" (2.5 cm) long wood screws as shown below.

4. Build a wooden frame with the INSIDE dimensions of your model listed above (Measure twice). The frame depth should be the same as the wall thickness. Fill in extra space from the opening to the studs with wood spacers as shown below.
5. Nail the spacers to the studs. They should be flush with the dry wall.
ASSEMBLY & INSTALLATION - THRU-THE-WALL (CONT.)

Refer to the SUPPORT BRACKET ASSEMBLY in the WINDOW MOUNTING section to assemble the support brackets. A wooden strip nailed to the outside wall should be used in conjunction with the angled sill support brackets.

5. Screw or nail the cabinet to the wooden frame using shims if the frame is oversized, to eliminate possible noise. Remember to maintain proper slope for water elimination.

MASONRY CONSTRUCTION

1. Cut or build a wall opening in the masonry wall similar to the frame construction (refer to the THRU-THE-WALL installation for a wall thickness greater than 8 1/2”).

2. Secure the cabinet in place using masonry nails, or masonry anchor screws. Or, build a frame using the instructions found in the THRU-THE-WALL installation section.

3. Make sure the masonry above the cabinet is supported well. Use the existing holes in the cabinet or additional drilled holes to fasten the cabinet at various positions. Make sure that the side louvers are clear of any obstructions.

4. Install the exterior cabinet support brackets according to the SUPPORT BRACKET INSTALLATION instructions in the THRU-THE-WALL installation section. Caulk or flash with aluminum if needed. This will provide a tight seal around the top and sides of the cabinet.

5. For a more aesthetically pleasing installation, apply wood trim molding around the sides of the cabinet without obstructing the side louvers.

6. Install the chassis into the cabinet by following the steps described in the WINDOW MOUNTING section.

OPTIONAL: Caulking and installation of the trim on the interior wall may be done if desired. Caulk the openings around the top and sides of the cabinet and all sides of the wood sleeve to the opening.

NOTE: See the WINDOW MOUNTING instructions for the bottom rail seal location.
USING YOUR AIR CONDITIONER
Electronic Control Panel & Remote Control

NOTE: This display always shows the room temperature in Fan Mode except when setting the Set temperature or the Timer.

For Cooling model

1. Digital Display: Without timer setting, the operation mode is Cooling, Dry, Fan, Heat and Auto, and the set temperature will be displayed. Time will be displayed under timer setting.

2. and Button: Use these buttons on the control panel and remote to increase or decrease the Set Temperature or Timer.

3. Temperature range: 61°F ~ 88°F or 16°C ~ 31°C.

4. Mode Button: Press the mode button to cycle through the various modes: Cool, Dry, Fan and Auto, or Heat.

Cool Mode: The cooling function allows the air conditioner to cool the room and at the same time reduces humidity. Press the MODE button to activate the cooling function. To optimize this function, adjust the temperature by pressing the up and down arrows and the speed by pressing the Fan Speed button.

Dry Mode: This function reduces the humidity of the air to make the room more comfortable. Press MODE button to set the DRY mode.

Fan Mode: This mode will only circulate the air. Press MODE button to select FAN MODE. Pressing the FAN SPEED button allows you to change the fan speed setting from HI, MED and LO. If using the remote control, it will store the fan speed setting from the most previous use.

Auto Mode: In AUTO mode the unit automatically chooses the fan speed and the mode of operation (COOL, DRY or FAN). In this mode the fan speed and temperature are set automatically according to the room temperature (Room temperature is determined by the temperature sensor located in the unit.)

Heat Mode: (if applicable) The heating function allows the air conditioner to heat the room. Press the MODE buttons to activate this function. Adjust temperature and speed with the up and down arrow keys.

5. Timer Button: Use these buttons on the control panel and remote to set the Timer. Press TIMER button a second time, set the stop time with pressing the button “ ∧ ” or “ ∨ ”, Press TIMER button a third time, confirm your settings and stop time. The display will show the time your machine will automatically turn on.

Note: It can be set to automatically turn off or on in 0.5-24 hours. Each press of the buttons will increase or decrease the timer. The Timer can be set in 0.5 hours increment below 10 hours and 1 hour increment for 10 hours or above. The SET light will turn on while setting. To cancel the set function, press the TIMER button again.
6. **ECO Button**: When the unit is in ECO mode, the light will turn on. In ECO mode, the unit will turn-off once the room is cooled to the user’s set temperature. The fan will also be off at this point. The unit will turn back on when the room temperature rises above the user’s set temperature. Before the compressor starts, the fan motor will run for a while, then it will stop for a while and will repeat to provide a more comfortable-feeling and save energy.

7. **Sleep Button**: Press the SLEEP button and all the display lights will turn off after a while (Sleep light is always on). In SLEEP mode, the air conditioner will automatically adjust the temperature and fan speed to make the room more comfortable during the night. The set temperature will automatically change every 30-60 minutes, and at most change 6x until the set temperature is 81°F-82°F (27.2°C-27.7°C) in cooling, and 75°F-76°F (23.9°C-24.4°C) in heating.

8. **Fan Speed Button**: Press the FAN SPEED button to select between LO, MED, HI or AUTO. In COOL MODE or HEAT MODE you can choose the following settings: HI, MED, LO, or AUTO. In FAN MODE you can choose from HI, MED or LO.

9. **Filter Button**: The Filter Check light will only turn on as a reminder to clean the filter after the fan motor has been in operation for a total of 500 hours. To turn the light off, press and hold the Filter Check button for 3-5 seconds.

10. **Directional Louvers**: Use the horizontal tabs to control horizontal airflow and the air deflectors to control vertical airflow.
1. **POWER**: Turn the air conditioner on and off.

2. **MODE**: Press the button to select the mode of operation, AUTO, COOL, DRY, FAN and HEAT. **NOTE**: The HEAT mode is inactive for Cool Only models. Press and hold the MODE button for more than 5 seconds to delete or add the HEAT mode on remote.

3. **"△" and "▽"**: Use these buttons to increase or decrease the Set Temperature or Timer. Temperature range is 61°F to 88°F (16°C-31°C)

4. **TURBO**: When the remote is ON, press the TURBO button to activate high fan mode. **NOTE**: For °F to °C change: After inserting the batteries in the off state, within 3 minutes, press and hold TURBO button for 5 + seconds to switch display from °F to °C.

5. **DISPLAY**: By pressing the DISPLAY button, this will switch off/on all lights or LED display.

6. **TIMER**: Use the buttons on the control panel and remote to set the TIMER

   **Timer Off**: When the unit is on, timer can be set by pressing the TIMER button. Set the run time by pressing the up "△" or down "▽" button until the desired run time is displayed, then press TIMER button again.

   **Timer On**: When the unit is off, press the TIMER button, set the time by pressing the "△" or "▽" button. Press TIMER button again to confirm the setting. Both the TIMER on and off indicators will illuminate once set.

   **NOTE**: It can be set to automatically turn off or on in 30 minutes to 24 hour intervals. Each press of the "△" or "▽" buttons will increase or decrease the timer. The TIMER can be set in 30 minute increments up to 10 hours, and 1 hour increments for 10 or hours and above. The SET light will turn on while setting. To cancel the set function, press the TIMER button again.

7. **"I FEEL"**: Press the "I FEEL" button to activate the follow me function, which enables the remote to take the temperature at its current location, and send this signal to the air conditioner to optimize the temperature around you and ensure comfort.

8. **FAN**: Press the "FAN" speed button to select the from fan options. You can choose Hi, Med, Lo or Auto in Cool Mode, and Hi, Med, Lo in Fan Mode.

9. **ECO**: When the unit is in ECO mode, the light will illuminate. In ECO mode, the unit will turn off once the room is cooled to the set temperature. The unit will turn back on when the room temperature rises above the set temperature. Before the compressor starts, the fan motor will keep cycling, to provide for a comfortable environment, while saving energy.

Battery Size: AAA - **NOTE**: Do not mix old and new batteries or different types of AAA batteries..
CARE AND MAINTENANCE

Clean your air conditioner to keep it looking new, minimize dust build up and for optimal performance.

The air filter should be checked at least once a month to see if it needs cleaning. Trapped particles and dust can build up in the filter and may decrease airflow as well as cause the cooling coils to accumulate frost.

To clean the air filter, power the unit off and:

1. Remove the filter by pulling down on the indents of the filter door on the front of the unit. (See FIG. 21)
2. Wash the filter using liquid dish soap and warm water. Rinse the filter thoroughly. Gently shake the filter to remove excess water.
3. Let the filter dry completely before placing it into the air conditioner.

NOTE:
If you do not wish to wash the filter, you may vacuum the filter to remove the dust and other particles.

Cabinet Cleaning
To clean the air conditioner cabinet:

- Power off and unplug the air conditioner to prevent shock or fire hazard. The cabinet and front panel of the air conditioner may be dusted with an oil-free cloth or wiped down with a damp cloth in a solution of warm water and mild liquid soap. Rinse thoroughly with a damp cloth and wipe dry.
- Never use harsh cleaner, wax or polish on the front of the cabinet.
- Be sure to wring excess water from the cloth before wiping around the controls. Excess water in or around the controls may cause damage to the air conditioner.

Winter Storage
To store the air conditioner when it is not in use for an extended period of time, remove it carefully from the window according to the installation instructions and cover it with plastic or place it in the original box. Remove the batteries from the remote before storing.

Wear and Tear
To minimize wear and tear on the air conditioner, always wait at least 3 minutes before changing modes. This will help prevent the compressor from overheating and the circuit breaker from tripping.
